FOREWORD

ACKNOWLEDGEMENTS

ABSTRACT

TABLE OF CONTENTS

CHAPTER 1. OVERALL INTRODUCTION

1.1 Introduction	1
1.2 Science learning and teaching: some empirical questions	1
1.3 Current perspectives on learning	3
1.4 The nature of students' ideas: its implications for the learning and teaching process	6
1.5 Classroom communication	11
1.5.1 The “two-languages” in science classroom	11
1.5.2 The explanatory schema for phenomena	13
1.6 Statement of the problem under investigation	18
1.6.1 General definition	18
1.6.2 Research paradigm	20
1.6.3 Premises	20
1.6.4 Objectives	22
1.6.5 Methodology	23

CHAPTER 2. REVIEW OF LITERATURE ON CONCEPT

UNDERSTANDING

2.1 Concepts: some major questions	26
2.1.1 The concept of concept	26
2.1.2 Concept attainment	31
2.1.3 Concept teaching	35
2.2 How can concept understanding be investigated: a variety of methods	40
2.2.1 The interview technique	40
2.2.2 Word-association technique	44
2.2.3 Paper and pencil assessment techniques – declarative knowledge	44
2.2.4 Paper and pencil assessment techniques - procedural knowledge	45
2.3 Types of studies on understanding of students’ conceptualizations	46
2.4 Some students’ conceptualizations in science	48

CHAPTER 3 EXPERIMENT I: CONCEPTS, RELATED LITERATURE AND DESIGN

3.1 The phenomena taken for study in this experiment	55
3.2 Literature search on students’ understanding of those phenomena	57
3.3 Sample	65
3.4 Collection of data	68
3.4.1 The technique	68
3.4.2 The tasks	68
3.4.3 The administration of the instruments	69
3.5 Analysis of data	71

3.6 Pilot-study	72
-----------------	----

CHAPTER 4 EXPERIMENT I: RESULTS

4.1 Students' frameworks	75
4.1.1 Expansion	75
4.1.2 Change of phase	81
4.1.3 Dissolving	87
4.1.4 Miscibility	90
4.1.5 Burning	92
4.1.6 "Heat" conduction	94

CHAPTER 5 EXPERIMENT I: CONCLUSIONS AND IMPLICATIONS

5.1 Conclusions	98
5.2 Implications	102

CHAPTER 6 EXPERIMENT II: CONCEPTS, RELATED LITERATURE AND DESIGN

6.1 Concepts	104
6.2 Sample	105
6.3 Methodology	106
6.3.1 Collection of data	106
6.3.2 Analysis of data	108
6.4 Scientific conceptualization of "heat", temperature and energy	109

6.5 Literature search on students' understanding of "heat", temperature and energy	121
6.5.1 "Heat"	122
6.5.2 Temperature	124
6.5.3 Energy	126
6.5.4 Effect of schooling upon students' understanding of "heat", temperature and energy	128

CHAPTER 7 EXPERIMENT II: RESULTS

7.1 Overall picture of observed teaching	133
7.2 Teacher's frameworks	134
7.2.1 "Heat"	134
7.2.2 Temperature	142
7.2.3 Energy	147
7.3 Consistency in teachers' frameworks across students age range and curriculum topics	156

CHAPTER 8 EXPERIMENT II: SUMMARY AND COMMONALITIES

8.1 Conclusions	158
8.2 Common features in teachers' and students' Conceptualizations of "heat", temperature and energy	163

CHAPTER 9 MAIN CONCLUSIONS, IMPLICATIONS AND SUGGESTIONS

9.1 Main conclusions	168
9.2 Implications of the conclusion for education	

in general and for science education in particular	172
9.3 Implications of the use of “two languages” in instruction	176
9.4 Suggestions	179

CHAPTER 10 COMMENTS AND SUGGESTIONS FOR FURTHER RESEARCH

10.1 Comments	186
10.2 Suggestions for further research	187
